

Tariff breakdown for pay-as-you-go residents at Leyton Central

MINI GUIDE

Insite Energy work on behalf of your heat provider, Carlton Grove Developments (Management), to provide metering and billing services to you. Below is an explanation of your heat tariff calculations. The rates applied by your heat supplier are solely determined to recover all the costs incurred through operating a heat network, and your heat supplier does not profit from the operation of the heat network.

The wholesale energy price cap

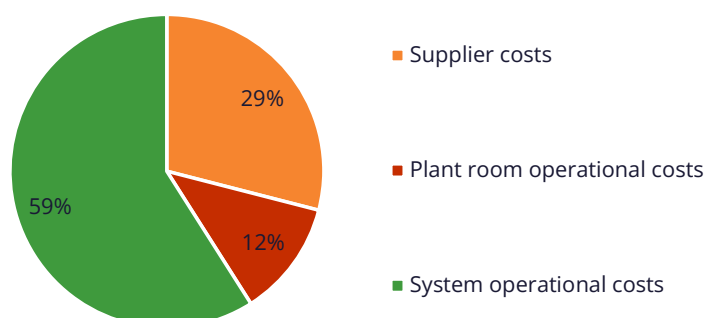

Your unit charge and daily standing charge has changed to reflect utility supply costs. To ensure that Carlton Grove Developments (Management) Ltd continues to recover the actual costs of operating your heat network, your heat tariff will decrease by 0.0468p/kWh and your daily standing charge by 0.0638p/day from 01/05/2023.

Due to the recent unprecedented increase in wholesale gas prices, the Government announced a wholesale gas price cap from 1st April 2023 until 31st March 2024 under the Energy Bill Discount Scheme (EBDS). Under this scheme, support is only provided if the wholesale gas price is above 10.7p/kWh. Carlton Grove Developments (Management) Ltd has secured a gas contract below this price. As a result, the contracted retail gas costs at Leyton Central will not receive a discount as part of the EBDS at this point in time.

Your unit charge breakdown

0.2868p/kWh

(percentage of apportioned costs)

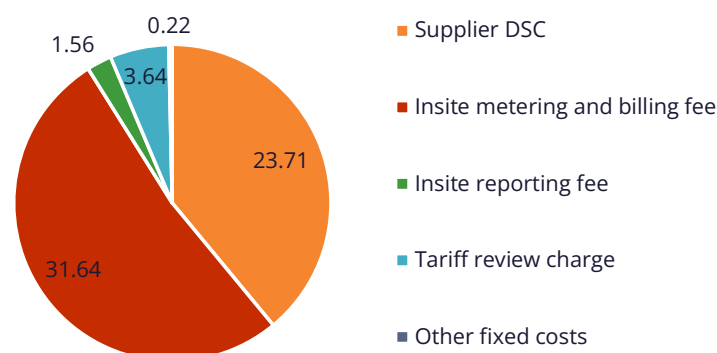

The average operational costs for a heat network equates to 56% of the unit charge breakdown.

Your daily standing charge breakdown

0.6077p/day

(pence per day)

⚠ Please note, your heat supplier does not profit from the operation of your heat network

Standard components of your heat tariff

Your **unit charge** covers the bulk cost of the energy generated in the communal plant room. It also includes any associated heat losses between the supply point and your home. Your energy consumption is measured via the heat meter installed in your home, so you only pay for what you have used. You are charged for every kilowatt-hour (kWh) consumed within your property.

Your **daily standing charge** is the fixed charge passed on by your heat provider, which covers the cost of operating the heat network and delivering energy to your home. This is an annual fixed amount that is payable every day by all residents regardless of how much energy they use.

Depending on your heat provider, the costs associated with running and maintaining the heat network will either be included within your building service charge or your heating and hot water daily standing charge.
